Our Purpose and Outreach

We are a math organization at Newberry College that invites any and all students interested in mathematics to join. Comprised mostly of Mathematics Majors, we work to promote the subject through our different activities and outreach opportunities. Our purpose is to gather those with an interest in mathematics in hopes of creating a mathematics community on the Newberry College campus.

Creating a community helps us to interests, develop a meaningful relationship between more experienced and less experienced math students, and provide a convenient and fun way to work on homework. We have meetings once or twice a month to see how everyone is progressing in their math classes as well as to see how the tutoring sessions have been going. This is also the time where we discuss upcoming math events and share ideas about other things we can do in the future.

We provide many opportunities for other students, and sometimes community members, to enjoy and further understand the world of Mathematics. Students are encouraged to attend weekly tutoring opportunities, if needed. Students may also experience many fun mathematical days filled with games and snacks like the infamous Pi Day in March. Students and community members alike enjoy attending performances by Mathematician Arthur Benjamin that are hosted by the S.U.M.

What We Offer

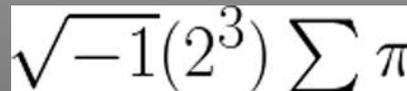

Tuesday Tutoring

Every Tuesday evening from six o' clock in the evening to eight o' clock in the evening, members from the S.U.M. will be in the Math and Science building on campus to help students with math. We encourage students to bring their friends and classmates.

Pi Day

March is Mathematics Awareness month, so we plan to celebrate the number 3.14 with one big bang. Students can pick up a slice of pie on the way to their next class, or spend some free time playing some math-filled trivia games.

Special Guests

We are lucky to have professors that can connect us with talented mathematicians and entertainers such as Arthur Benjamin. His show dazzles both math lovers and math haters alike. S.U.M. members were overjoyed to spend some time with Dr. Benjamin before his show, and pick his brain on different math topics.

The S.U.M. and RE-MAST

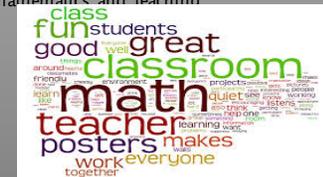

Ma
Sec
Ted

large portion of the S.U.M.

The S.U.M. and RE-MAST work very closely at Newberry College. Many of the Mathematics Newberry are aspiring Education reason, a

membership is made up by RE-MAST scholars, which allows students to share ideas, questions, and concerns about teaching math. Through the Tutoring Tuesdays offered by the S.U.M., members are able to gain experience in teaching upper-level math material to students. RE-MAST provides opportunities for members of the S.U.M. to interact with prospective science teachers and learn from experienced and growing teachers. Through RE-MAST we are offered an opportunity to combine two of our favorite things: mathematics and teaching

What We Hope to do in the Future

In the future the S.U.M. hopes to grow in membership, so that we may reach more students and community members. We would like to host guests more frequently and raise campus awareness and participation in Tutoring Tuesdays and fun activities, such as Pi Day.
